Summary

Senior Site Reliability & DevOps Engineer with 10+ years designing, scaling, and operating Kubernetes-based cloud platforms on AWS. Deep expertise in multi-cluster EKS operations, SLO/SLI engineering, observability, CI/CD modernization, and incident management. Proven track record reducing incidents by 75%, cutting alert noise by 80%, and driving platform reliability through automation, error-budget-based alerting, and AI-assisted operational workflows. Strong collaborator influencing engineering teams on platform standards, cloud-native adoption, and operational excellence.

Core Strengths

Kubernetes & Container Platforms • AWS Cloud • SLO/SLI Engineering • Observability (Prometheus, Grafana, ELK) • DevOps & CI/CD • Infrastructure as Code (Terraform, CloudFormation) • Incident Management & RCA • Automation & Scripting (Python, Bash) • Cost Optimization • Platform Reliability • GitOps • AI-assisted Operations • Technical Leadership • Cross-team Collaboration

Technical Skills

- **Languages:** Python, Bash, REST APIs
- **Containers & Orchestration:** Docker, Kubernetes (EKS, RKE, Rancher), Helm
- **Cloud/Platforms:** AWS, Azure, Pivotal Cloud Foundry
- **Infrastructure as Code:** Terraform, CloudFormation, Chef, Ansible, Puppet
- **CI/CD:** Jenkins, GitLab CI, Azure DevOps
- **Observability & Monitoring:** Prometheus, Grafana, ELK, Splunk, Zabbix, Nagios
- **Architecture:** High Availability, Autoscaling, SLO/SLI frameworks, Error Budgets, Incident Response, Platform Hardening

Leadership and Teamwork Skills

- Mentored and influenced a 12-member engineering group on Kubernetes adoption, reliability engineering, and platform standards.
- Led high-severity incident response as Incident Commander, driving structured RCA and cross-team coordination.
- Collaborated with developers, architects, and product teams to align reliability goals with business SLAs.
- Guided junior engineers on observability, automation, and cloud-native best practices.

Problem-Solving and Innovation Skills

- Reduced production incidents by **75%** through SLO-driven alerting, proactive monitoring, and platform hardening.
- Cut alert noise by **80%** using error-budget-based alerting and automated health validation.
- Introduced **AI-assisted operational workflows** for log correlation, RCA drafting, and automation scripting—accelerating investigation and improving consistency.
- Designed end-to-end observability architecture enabling faster MTTR and proactive detection.
- Optimized infrastructure costs through autoscaling and performance tuning, eliminating unnecessary capacity.

Senior Site Reliability Engineer — Mimecast India Pvt Ltd, Bengaluru | Aug 2023 – Present

- Architected and operated **10+ production-grade EKS clusters**, supporting high-availability services across multiple teams.
- Defined and implemented **SLO/SLI frameworks** (0.5% failure rate, 6-second query timeout) aligned with business SLAs.
- Reduced incidents from **5 per month to 1 in 2 months** through reliability engineering and platform hardening.
- Designed and deployed **observability stack** (Prometheus, Grafana, ELK) for proactive monitoring and faster MTTR.
- Implemented autoscaling and performance tuning to reduce cloud costs and improve resource efficiency.
- Led high-severity incidents as **Incident Commander**, driving structured RCA and operational improvements.
- Introduced **AI-assisted analysis workflows** for logs, RCA, and automation—improving investigation speed and consistency.
- Defined Kubernetes platform standards and onboarding guidelines adopted across engineering teams.
- Mentored junior engineers and influenced a 12-member engineering group on reliability best practices.

Senior Devops Engineer — Siemens Gamesa Renewable Energy, Bengaluru | May 2021 – Aug 2023

- Introduced Kubernetes as the first platform engineer; designed and provisioned **4+ production clusters** using Terraform and RKE.
- Onboarded **20+ applications** across multiple teams to Kubernetes.
- Migrated Jenkins workloads to Kubernetes, reducing CI downtime by **60%**.
- Built centralized observability platform (Prometheus, Grafana, ELK) for **100+ services**.
- Developed and maintained GitLab CI/CD pipelines for **25+ Java and .NET services**.
- Standardized environments using Terraform, Chef, and Ansible across **100+ Linux & Windows servers**.

Senior Devops Engineer — JLL Technologies, Bengaluru | Dec 2020 – May 2021

- Built end-to-end CI/CD pipelines using Azure DevOps and GitHub.
- Deployed and operated containerized Spring Boot applications on Kubernetes.
- Implemented zero-downtime deployments using Azure deployment slots and Function Apps.
- Integrated Docker, Gradle, SonarQube, and YAML pipelines for automated build, test, and delivery.

Senior Devops Engineer — Wipro Technologies, Bengaluru | Oct 2018 – Dec 2020

- Standardized CI/CD templates using Jenkins and GitLab for **400+ microservices**.
- Led migration from monoliths to microservices, improving deployment consistency.
- Implemented Azure DevOps pipelines with Docker and SonarQube.
- Integrated centralized logging and monitoring using Splunk and New Relic.

Software Engineer — Ford Motors Pvt Ltd, Chennai | Jul 2015 – Sept 2018

- Built and maintained Jenkins CI pipelines using Gradle for enterprise applications.
- Implemented branching strategies and quality gates using Git and SonarQube.
- Integrated performance testing using JMeter.
- Supported early cloud-native deployments on Pivotal Cloud Foundry (PCF).

Education

National Institute of Technology, Agartala -B.Tech(ECE) - CGPA(8.57 out of 10) - 2015(passout)

Awards and Recognition

- Hands-on AI Masterclass Certification – ([Certification Link](#))
- Employee of the Quarter — Mimecast (Jul–Sep 2025)
- Automation Champion — Wipro Technologies (2019)
- Asia Pacific Excellence Award — Ford (2018)

Professional Development & Interests

Kubernetes • Cloud Platforms • SRE Practices • Observability • Automation • Infra as Code • AI-assisted Operations • DevOps Tooling • Scalability • Performance Engineering • Incident Response • Root Cause Analysis
